Teletrac® Offers Automated Fuel Tax Reporting

Garden Grove, CA

Teletrac, Inc., manufacturer of the FleetDirector® vehicle tracking and fleet management system, has announced the availability of its automated State Fuel Tax Report. This report further supplements the other fleet management reports currently available with FleetDirector's eClient® data collection system.

Using a combination of vehicle location data provided by FleetDirector's active, enhanced GPS system and vehicle operating data captured by Teletrac's Prism™ onboard recorder, the State Fuel Tax Report provides customers with complete, fully-documented information needed for state fuel tax reporting. The report meets all IFTA standards.

Collected information includes a mileage summary by state, by vehicle, for a specified period of time. Details include the vehicle name or ID code, state abbreviation, the total miles driven in that state and a total for all miles driven for that vehicle.

MORE

Teletrac Fuel Tax, Add 1

Users can select running a report for all vehicles or just one, for a single day or for a group of days.

According to Teletrac coo Tim VanCleve, the report offers several advantages to Teletrac customers. He noted, "This greatly speeds up and simplifies the fuel tax reporting process. Tedious, mistake-prone and labor-intensive fuel tax preparation operations can be replaced with more productive use of time. In addition, customers have complete and accurate documentation should they be audited. This is another example of Teletrac's commitment to helping our customers' operations become more efficient."

Teletrac, Inc., headquartered in Garden Grove, CA, is a wholly-owned subsidiary of UK-based Trafficmaster, Plc, a leading supplier of vehicle navigation and support systems. For additional information, contact Teletrac at 1-800-835-3872, via e-mail at sales@teletrac.net or on the web at www.teletrac.net.
